The ability to alter an organism's genotype relies on the introduction and persistence of foreign DNA, also known as transgenic DNA.

Genome editing, or genome engineering, or gene editing, is a type of genetic engineering in which DNA is inserted, deleted, modified or replaced in the genome of a living organism. Unlike early genetic engineering techniques that randomly inserts genetic material into a host genome, genome editing targets the insertions to site

Genetic engineering is the process of modifying an organism of a genetic level- for example, inserting or modifying a gene into an organism is genetic engineering. However, steroids are simply compounds (like vitamins or hormones) that can affect bodily function- they don't modify your body on a genetic level!
