Applications of Hard/Soft Theory . The . Qual Scheme, a series of chemical reactions used to separate and identify the presence of dozens of metal ions, is based largely on the hard and soft properties of the metal ions. The softer metals are precipitated out as chlorides or sulfides, with the harder ions formed as carbonates.

Theory

This is explained as Pd^{2+} is a soft acid and therefore it prefers to coordinate through softer S atom to form Pd-SCN bond, on the other hand Co^{2+} is a hard acid so it prefers to coordinate through the harder N atom to form Co-NCS bond. Note:-there are many examples in which both - SCN and - NCS bonding to same
