language specialized to a particular application domain. This is in contrast to a general-purpose language, which is broadly applicable across domains. There are a wide variety of DSLs, ranging from widely used languages for common domains, such as HTML for web pages, down to languages used by only one or a few pieces of software, such as

domain-specific language as an extension of an existing programming language (called a host language) has several advantages. First, we can leverage off existing functionality and not have to re-implement common language constructs. Second, the extensions themselves only need to be transformed to the point where
