The abhorrent practice involves sanitation workers, mainly belonging to the lower castes, going down into manholes to unblock and clean the sewers or manually clean the septic tanks. They do so without any protective gear and come in contact with toxic gases. The law has yielded little result in discontinuation of this inhuman practice.

A properly functioning septic tank will reduce the BOD in the effluent by about 25 to 30 percent. Greater reductions occur when the septic tank is compartmentalized. Further reduction occurs as the effluent comes in contact with bacterial growth in the leaching system and the aerated soil zone above the ground water table.
