Although I use it to verify the adjustments, it is possible to get the oboe to play well without using a feeler gage at all. This method works best on an oboe that is in good basic repair, with well sealing pads and nice tight mechanism. It is a supplement to regular professional maintenance, not a substitute for it.

When adjusting an oboe, two methods are used. First, use the cigarette paper to check that the adjustment is not too tight. Then play-test the oboe, feeling for vibrations on the secondary key to make sure nothing is too loose. The adjustment screws regulate the pressure of the keys that you do not touch during normal playing conditions.

The adjustments should be quiet and secure. To achieve this it is not enough to simply replace pads and adjust the instrument well. It is absolutely necessary to lay a solid mechanical foundation first. This means ensuring that the wood is sound and airtight, and the toneholes crisp and flat. The posts must be solid and properly aligned, and the keys must be tight yet move freely.
