Biochemistry, sometimes called biological chemistry, is the study of chemical processes within and relating to living organisms. Biochemical processes give rise to the complexity of life.. For instance, in every living cell, there is a crucial biological process, called respiration. This process is the conversion of glucose into a useful form of energy, which is ATP(adenosine triphosphate).

Biochemists and Biophysicists : Occupational Outlook ...

The term biochemistry is synonymous with two somewhat older terms: physiological chemistry and biological chemistry. Those aspects of biochemistry that deal with the chemistry and function of very large molecules (e.g., proteins and nucleic acids) are often grouped under the term molecular biology. Biochemistry is a young science, having been known under that term only since about 1900.
